PROFESSIONAL SUMMARY

Software Developer with 4+ years of progressive experience designing and delivering high-scale fintech products at Mirae Asset Sharekhan and AI NXT Technovations. Expert in microservices architecture, distributed systems, and API gateway patterns using ASP.NET Core. Proficient across full stack — Angular and React frontends, ASP.NET Core microservices, Kafka event-driven pipelines, and multi-database backends (MSSQL, MySQL, PostgreSQL, Oracle). Strong expertise in system design, performance optimization, security implementations, and regulatory compliance (KYC, AML). Consistently delivers measurable business impact: 40% reduction in manual effort, 50% faster document processing, 30% reduction in onboarding errors, 40% reduction in impersonation incidents through biometric security.

PROFESSIONAL EXPERIENCE

Software Developer | AI NXT Technovations PVT LTD

May 2025 - Present

- Architected end-to-end fintech, audit, and compliance platforms supporting high transaction volumes through horizontally scalable ASP.NET Core microservices deployed behind Nginx reverse proxy and load balancer for high availability and performance.
- Designed event-driven notification system using Apache Kafka with multi-channel delivery (WhatsApp, Email, SMS) featuring at-least-once delivery guarantees and dead-letter queue handling for fault isolation and reliability.
- Implemented API gateway patterns including rate limiting, circuit breaker pattern, and exponential backoff retry logic to protect downstream services from cascading failures and sudden traffic spikes.
- Automated KYC onboarding, document verification, and client communication workflows using Hangfire background jobs and OCR-powered pipelines, achieving 40% reduction in manual processing effort while improving accuracy.
- Established distributed logging, monitoring, and tracing across all microservices using centralized log aggregation, enabling rapid root-cause analysis and maintaining consistent audit readiness for regulatory compliance.
- Championed secure access practices, data protection standards, and cross-team accountability, strengthening application reliability and trust across production systems.

- Oversaw full project lifecycles from discovery and planning through release and production support, balancing delivery timelines against evolving business priorities.

Junior Software Developer | PRM Soft Solution Pvt LTD

March 2023 - April 2025

- Re-architected monolithic system into event-driven microservices covering onboarding, document management, and KYC validation, improving scalability and enabling independent service deployment cycles.
- Engineered bill creation and approval module using ASP.NET Core Web API, reducing manual processing effort by 20% and improving reliability in concurrent approval workflows.
- Converted business requirements into technical solutions using SOLID principles and design patterns, reducing requirement rework by 35% and improving alignment between product and engineering teams.
- Ensured smooth and timely releases by implementing feature flags and automated testing strategies, reducing production issues by 25%.

Trainee Software Developer | PRM Soft Solution Pvt LTD

July 2022 - February 2023

- Designed and built interactive frontend pages using React, Angular, Bootstrap, and JavaScript, improving application responsiveness by 20% through component reuse and debounced API call patterns.
- Collaborated with team members to troubleshoot and resolve project roadblocks using Git version control and JIRA project management, accelerating development timelines by 10% while maintaining code quality standards.

KEY PROJECTS & ACHIEVEMENTS

OneAudit - End-to-End Audit Management System

- Created end-to-end audit management system from scratch using ASP.NET Core Web API, Entity Framework Core, and MySQL. Configured rule-driven audit engine allowing auditors to define audit logic based on turnover, registration type, and asset classification.
- Streamlined audit processing by leveraging OCR services for intelligent data extraction and validation from bank statements and DP reports, cutting manual effort by 50%.
- Orchestrated asynchronous communication using Apache Kafka across WhatsApp, Email, and SMS channels for reliable, real-time audit notifications.
- Controlled document upload and verification processes with validation rules, role-based access control (RBAC), and complete audit trails for compliance.

- Provisioned Linux-based production environments with Nginx reverse proxy, supporting secure deployments and high availability. Frontend built with Next.js and React.js for report tracking, filtering, and workflow management.

OneKYC - Microservices-Based KYC Onboarding Platform

- Migrated legacy monolithic onboarding system to ASP.NET Core microservices architecture with REST APIs, enhancing system maintainability, scalability, and deployment independence.
- Integrated PostgreSQL and Oracle databases to support complex onboarding and KYC workflows with data consistency and performance optimization.
- Automated real-time PAN verification through external APIs, reducing onboarding errors by 30% and improving customer experience.
- Implemented secure document upload workflows for identity, address, and income verification with encryption and data validation.
- Established admin review and audit portal with automated client notifications for data corrections, ensuring end-to-end data security and regulatory compliance.

TradeTiger - Biometric Authentication Module

- Replaced legacy authentication logic with modern ASP.NET Core Web API solution, securing 100% of user access workflows.
- Adopted 2-layer biometric verification using Face Recognition and Liveness Detection, reducing impersonation incidents by 40% through facial data validation on registration and login flows.
- Monitored active trading sessions with periodic verification checks, preventing 100% of identified unauthorized access attempts through continuous security monitoring.

Utility Service - Centralized Verification Microservice

- Established centralized Utility Service microservice in ASP.NET Core, consolidating 6 core shared capabilities into single reusable backend layer.
- Onboarded 6 AI/ML verification services including e-Sign, PAN Match, Aadhaar Match, Face Match, OCR, and Liveness Detection to standardize identity processing.
- Delivered 10+ reusable REST API endpoints leveraged by 3 production systems (OneKYC, OneAudit, TradeTiger).
- Eliminated redundant third-party integrations across platforms, increasing development efficiency by 35% and lowering long-term maintenance effort.

TECHNICAL SKILLS

Programming Languages: C#, JavaScript, TypeScript, SQL

Databases: MSSQL, MySQL, PostgreSQL, Oracle Database, Redis Cache

Web Technologies: HTML5, CSS3, Bootstrap, Tailwind CSS, Material UI, jQuery, AJAX, Responsive Design

Architecture & Patterns: Microservices Architecture, Event-Driven Architecture, REST API Design, API Gateway Pattern, Circuit Breaker, Repository Pattern, SOLID Principles, Design Patterns

DevOps & Infrastructure: Docker, Kubernetes, Nginx, IIS, Linux, Windows Server, CI/CD Pipelines, Git, GitHub, GitLab, Azure, AWS

Tools & Platforms: Git, GitHub, GitLab, Docker, Kubernetes, JIRA, Postman, Apache Kafka, Swagger/OpenAPI, SVN

Specializations: FinTech Development, KYC/AML Compliance, Authentication & Authorization, Biometric Security, Distributed Systems, High-Availability Systems, Real-Time Processing, Payment Processing, Database Optimization, Performance Tuning

EDUCATION

Bachelor of Engineering in Computer Science

Vidyalankar Institute of Technology, 2016 - 2020

CORE COMPETENCIES

Software Architecture Design • Microservices Development • Distributed Systems • API Development • Database Design & Optimization • Agile Development • Secure Coding Practices • System Scalability • Performance Optimization • FinTech Solutions • Compliance & Regulatory Requirements • Team Leadership & Mentoring
